Data Modelling and Form Design

Aim

To design and develop a **Student Admission Form** using Zoho Creator by creating a structured form, applying appropriate validations, and managing student admission details efficiently.

Theory

Data modelling and form design involve organizing information into suitable fields and sections for efficient collection and management. In Zoho Creator, forms can be created using different field types such as Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Drop Down, Radio, Multi Select, and Checkbox.

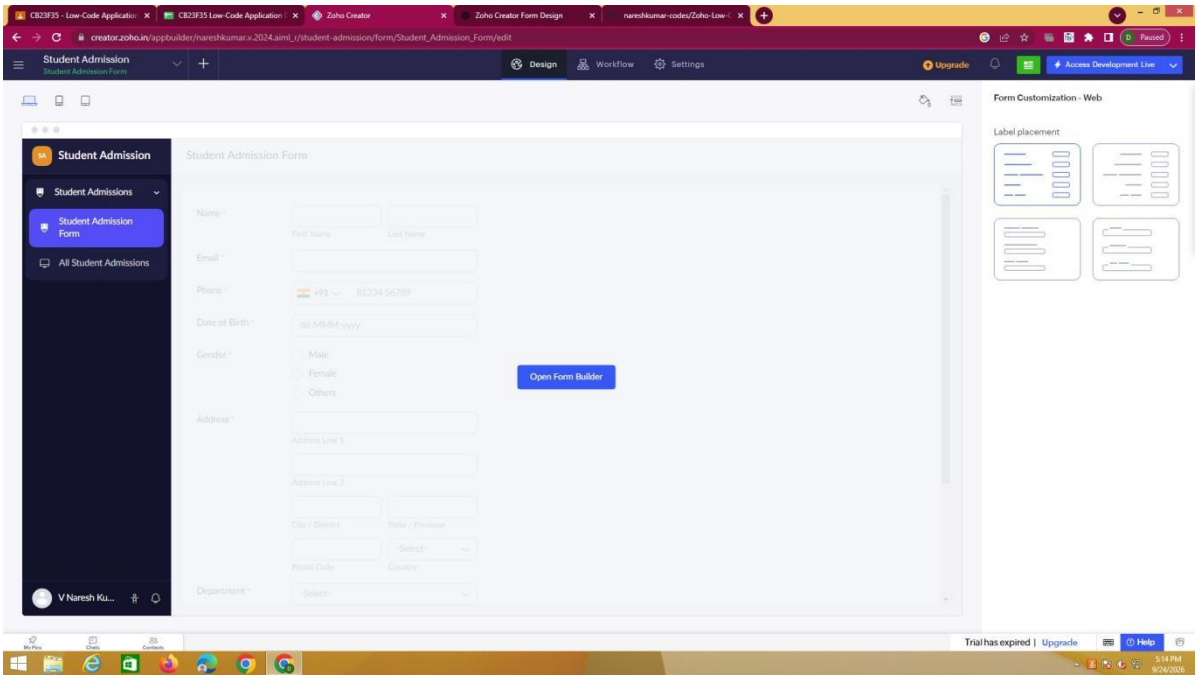

In this experiment, a **Student Admission Form** is designed to collect student personal details, contact information, academic details, parent information, and admission details. The form contains fields such as Name, Email, Phone, Date of Birth, Gender, Address, Course, Department, 10th Percentage, 12th Percentage, Parent Name, Parent Phone, Admission Date, Register Number, and Admission Status.

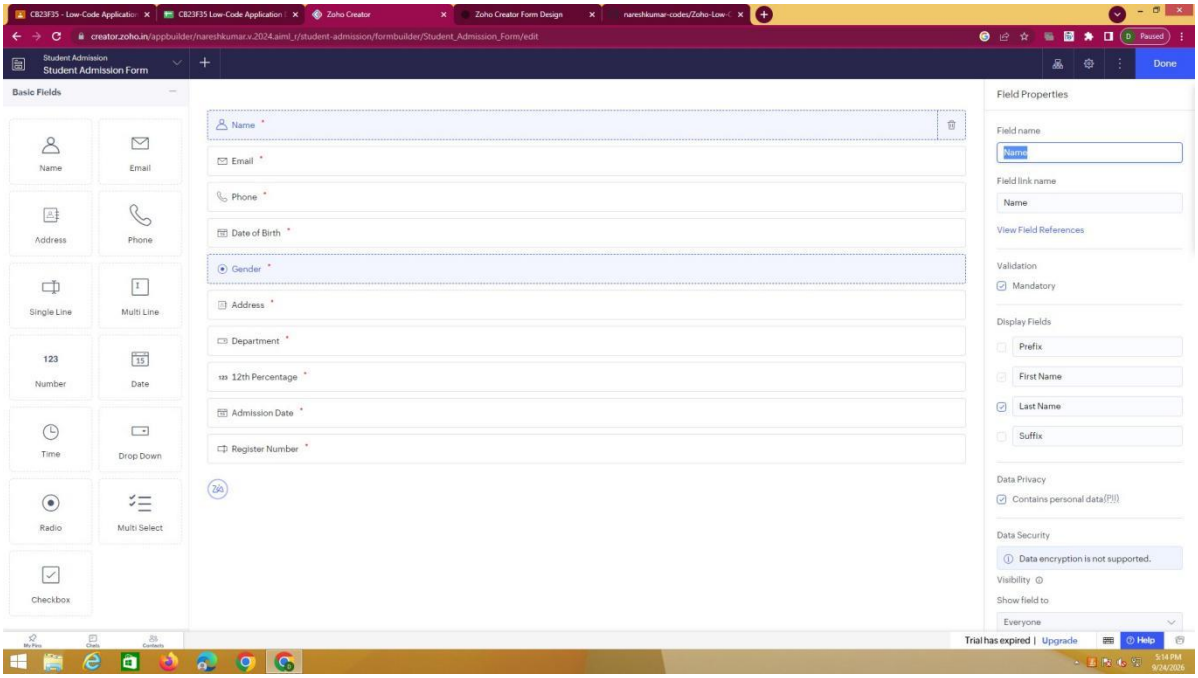

The form is organized to make student information entry clear and structured. Validations are applied to ensure accurate data entry, including mandatory fields, valid email and phone formats, percentage values, and appropriate selections for course, department, gender, and admission status. Submitted information is stored in Zoho Creator and can be reviewed for student admission management.

Procedure

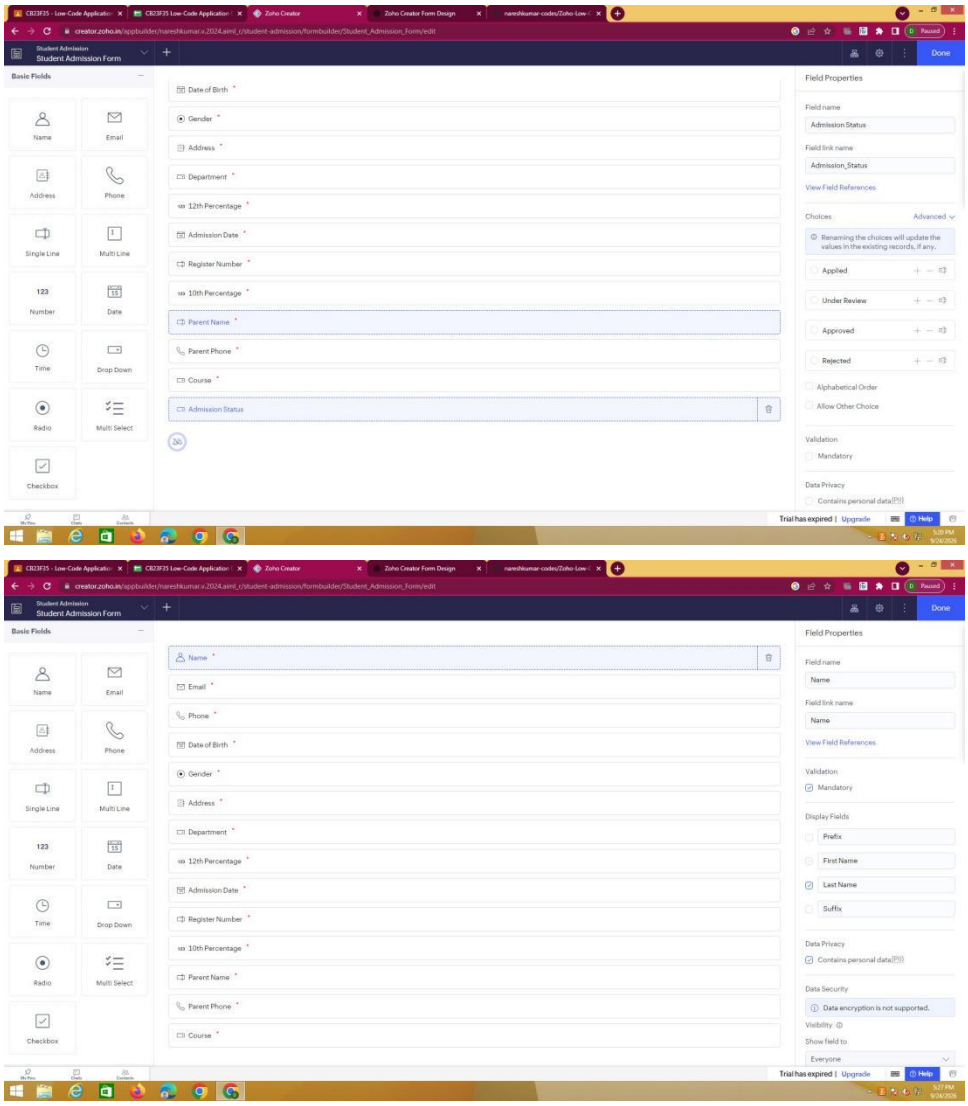

1. Open Zoho Creator and create/open the **Student Admission** application.
2. Create the **Student Admission Form**.
3. Add the required fields for student, contact, academic, parent, and admission details.
4. Add fields such as Name, Email, Phone, Date of Birth, Gender, Address, Course, Department, 10th Percentage, 12th Percentage, Parent Name, Parent Phone, Admission Date, Register Number, and Admission Status.
5. Configure the required fields as **Mandatory** and set suitable choices for the dropdown and radio fields.
6. Save and preview the Student Admission Form.
7. Enter sample student admission details and submit the form.
8. Open the student admission records and verify that the submitted information has been stored correctly.
9. Review the submitted student record for admission management.

Result

The **Student Admission Form** was successfully created in Zoho Creator with a structured data model, appropriate fields and validations. The submitted student details were successfully stored and can be reviewed for effective student admission management.
