# 1. AIM

To design and demonstrate a Student Admission Management application in Zoho Creator that organizes admission records and applies security and governance practices. The application includes admission forms, student and access-policy areas, validation rules, and workflow/blueprint configuration to support consistent data entry and controlled management.

# 2. OVERVIEW

Zoho Creator is a low-code application development platform used to build forms, reports, workflows, and business processes. In this practical, a Student Admission application is configured with a dashboard and modules for Admission Applications, Academic Streams, User Permission, Access Policies, Student Profiles, Audit Log, and Validation Rule. The dashboard summarizes application counts, rule priorities, and verification status. Validation rules help maintain data quality, while workflows and blueprints support process automation and governance.

# 3. PROCEDURE

### Step 1 – Open the application dashboard

Open the Student Admission – Security and Governance application in Zoho Creator. Review the dashboard cards and charts to understand the current number of admission applications, user permissions, access policies, student profiles, and verification status.

### Step 2 – Create an admission application form

Open Admission Applications and select Admission Application. The form contains fields for Student, Program Applied, Academic Stream, Entrance Exam Score, Previous School, Application Date, Document Upload URL, Verification Status, Remarks, and Archived.

### Step 3 – Review admission records

Open All Admission Applications to view saved records in a report. Check the student identifiers, selected programs, academic streams, entrance exam scores, previous schools, application dates, and document links.

### Step 4 – Configure academic streams

Open Academic Streams to organize applications by stream, such as Science, Commerce, General, and Arts. The view also displays associated programs and school information where available.

### Step 5 – Configure validation rules

Open Validation Rule Report to review rules such as Unique Student ID, Required Field Check, Phone Number Format, Age Validation, and Email Format Check. These rules help enforce required fields, valid formats, and appropriate values.

### Step 6 – Set up workflow automation

Open Form Workflows and review the Auto-Set Application Date workflow. The workflow is shown as enabled and contains one action, supporting consistent handling of the application date.

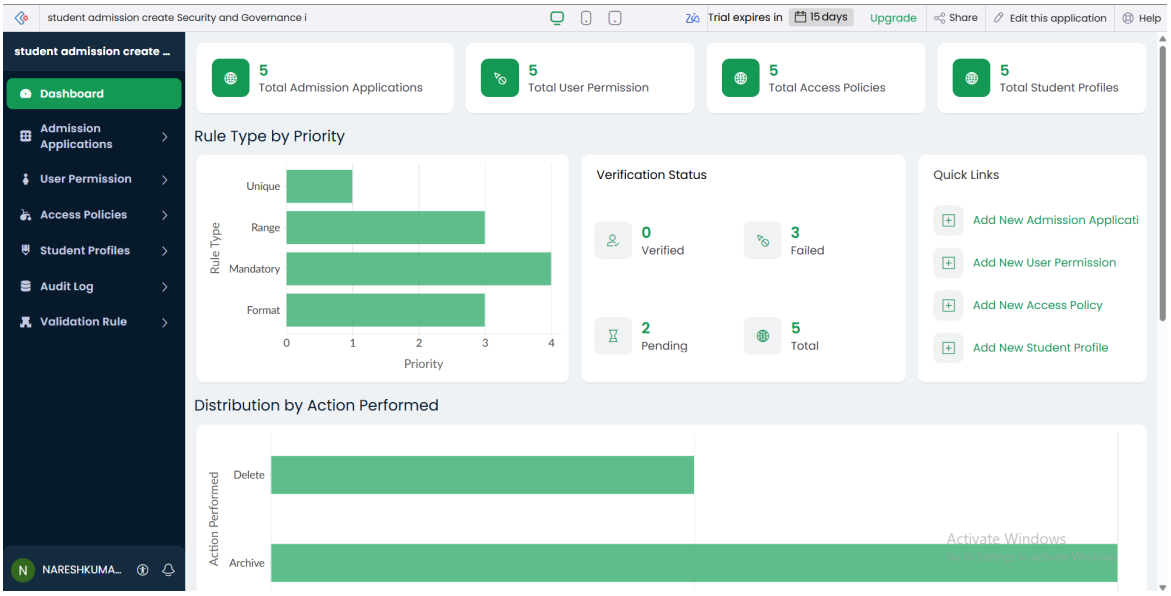

### Step 7 – Configure the blueprint

Open Blueprints and review the Security and Governance blueprint associated with the Access Policy form. Confirm that the blueprint is enabled and available for the configured process.

## 4. SCREENSHOTS / PROCEDURE EVIDENCE

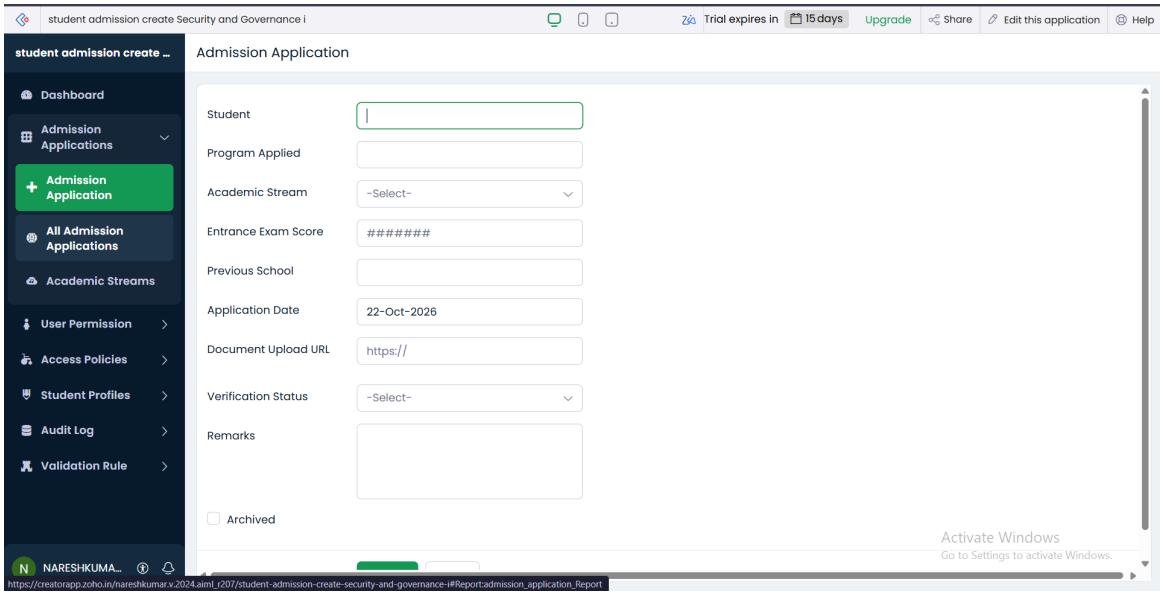

The following screenshots document the application dashboard, admission form and report, academic streams, validation rules, workflow, and blueprint configuration.

## Screenshot 1: Student Admission dashboard — summary cards, rule-priority chart, verification status, and quick links.

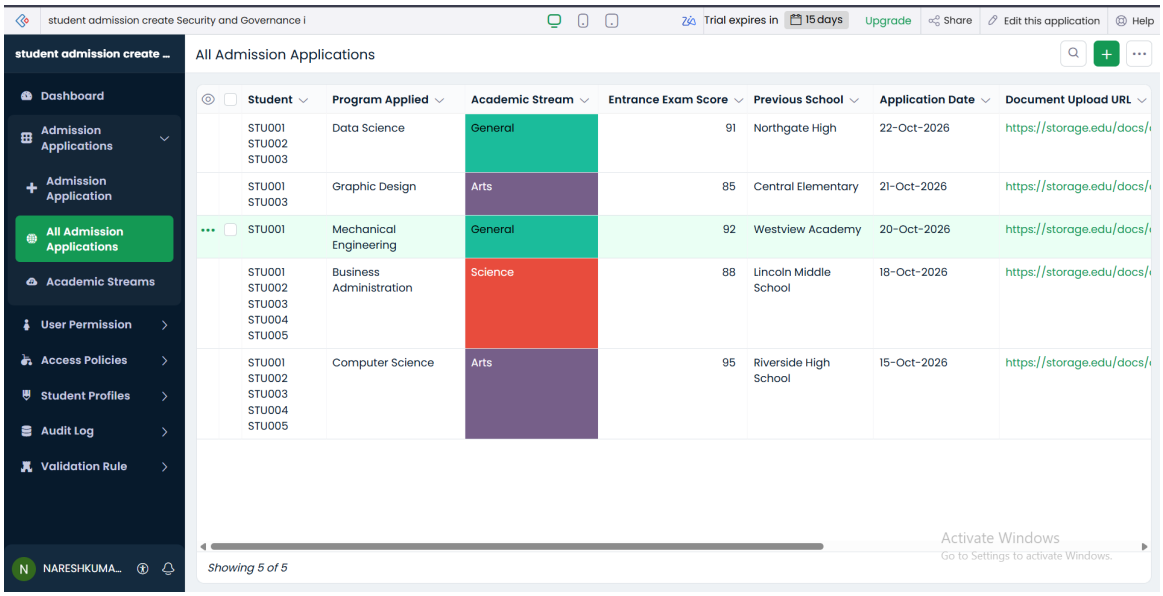

summary cards, rule-priority chart, verification status, and quick links.

## Screenshot 2: Admission Application form — fields used to enter student and admission details.

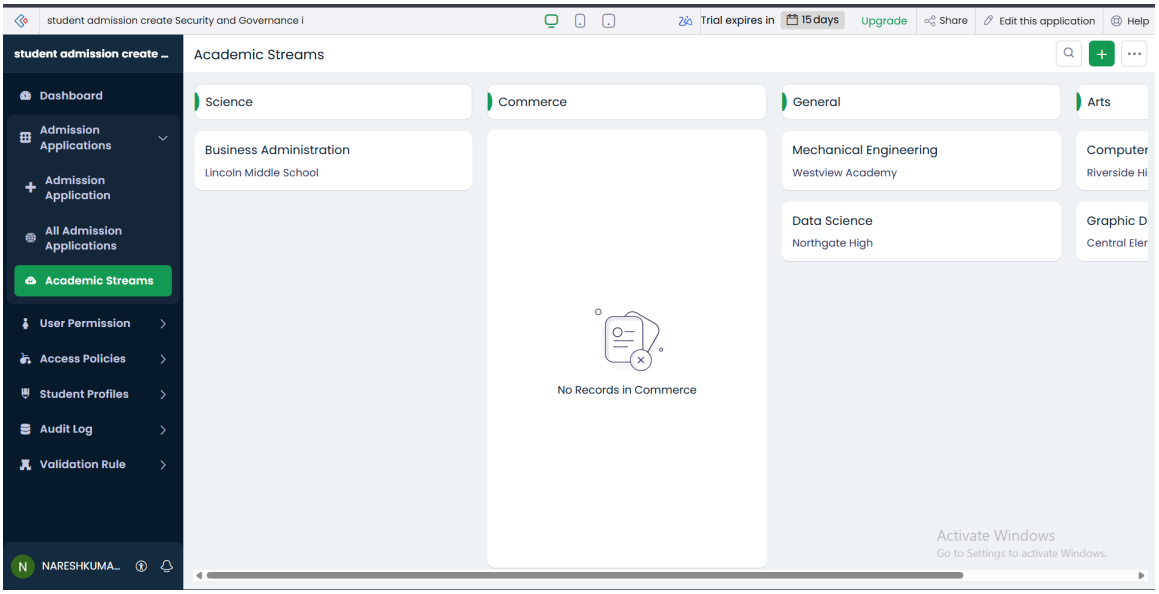

fields used to enter student and admission details.

## Screenshot 3: All Admission Applications report — saved admission records and key details.

## Screenshot 4: Academic Streams — stream categories and associated program/school records.

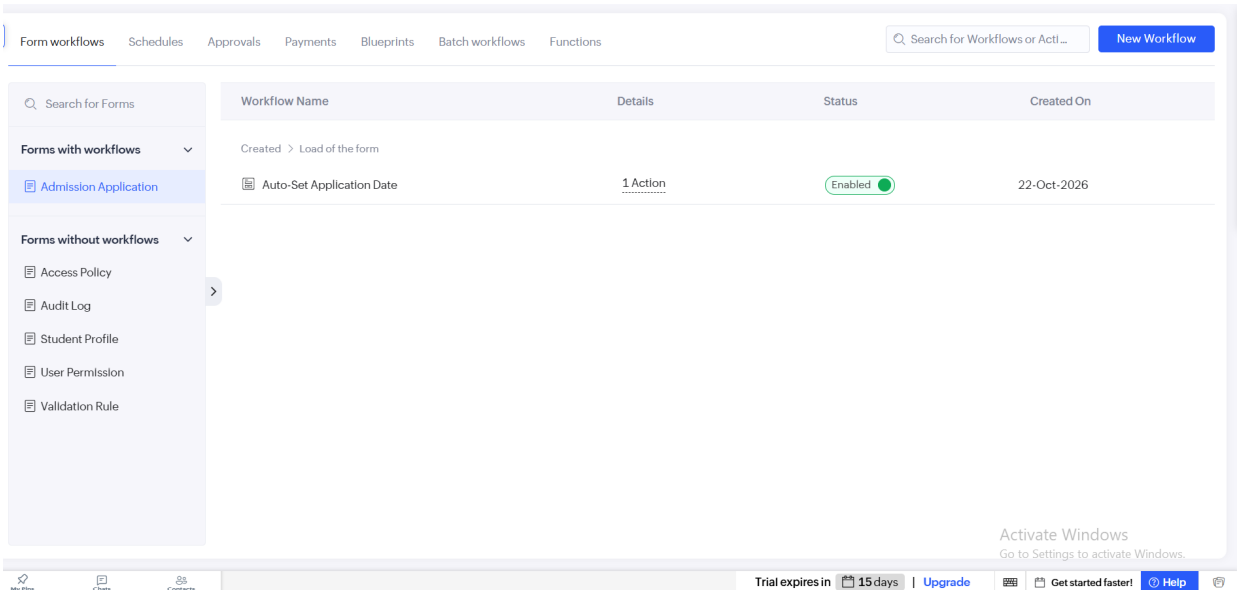

stream categories and associated program/school records.

## Screenshot 5: Validation Rule Report — configured validation rules for data quality.

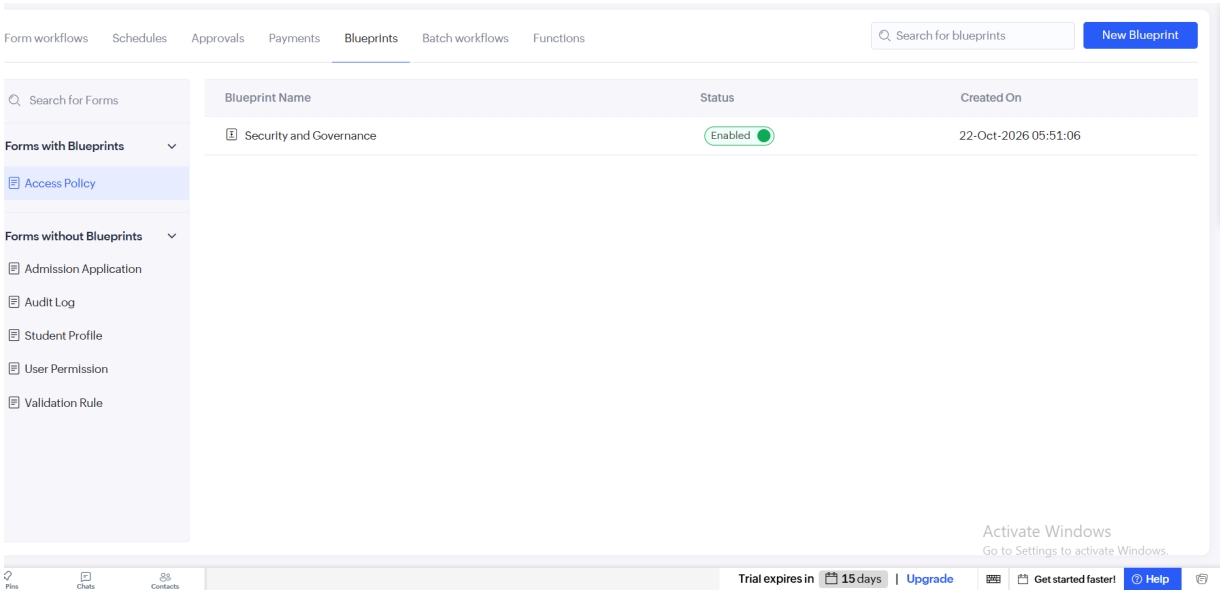

configured validation rules for data quality.

## Screenshot 6: Form Workflows — enabled Auto-Set Application Date workflow.

enabled Auto-Set Application Date workflow.

## Screenshot 7: Blueprints — enabled Security and Governance blueprint.

enabled Security and Governance blueprint.

## 5. RESULT

The Student Admission application was configured and reviewed in Zoho Creator. The application provides a dashboard, an admission-entry form, a report of admission records, academic-stream organization, validation-rule reporting, an application-date workflow, and an enabled Security and Governance blueprint. These features demonstrate how a low-code application can support organized admission processing, data validation, workflow automation, and governance. The screenshots are included as evidence of the configuration and interface.

## Conclusion

This practical demonstrates the use of Zoho Creator to build and manage an admission application with basic security and governance components. Validation rules improve data consistency, while workflows and blueprints provide a foundation for standardized processes. Actual access permissions and audit behavior should be tested with the intended user roles before the application is used in production.
