Aim

To study the Student Admission System developed in Zoho Creator and understand how student profiles, program enrollments, and API integration activities are managed and monitored through the application.

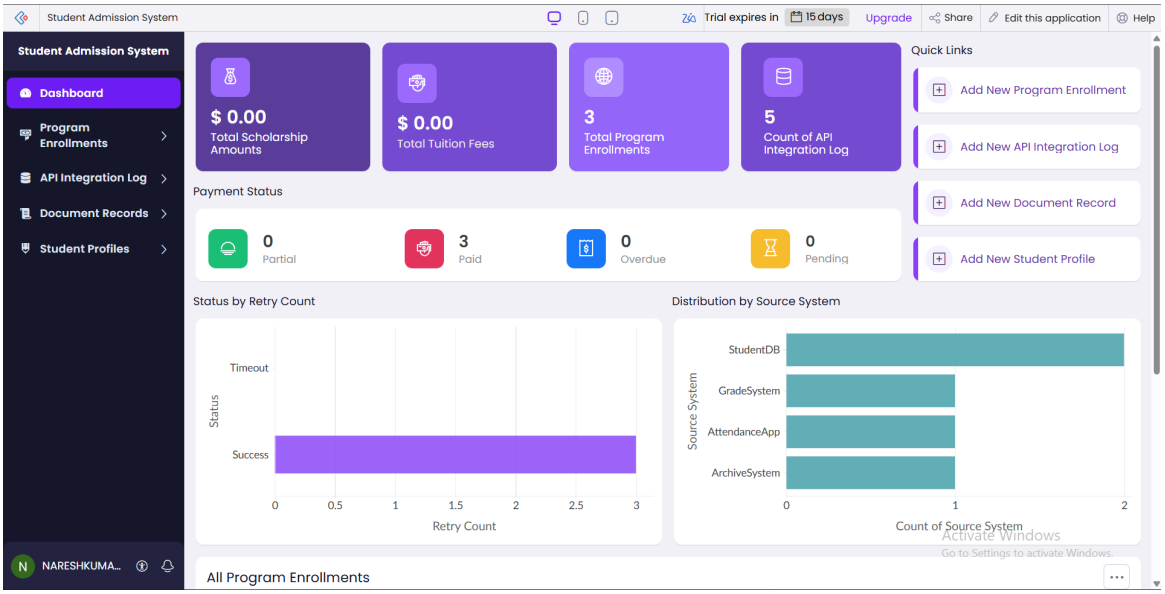

Procedure

1. Open the Student Admission System application in Zoho Creator and review the Dashboard.
2. Observe the dashboard summary cards for scholarship amounts, tuition fees, program enrollments, and API integration logs.
3. Open Program Enrollment and review the fields for student ID, program name and code, dates, semester, fees, scholarship, enrollment status, and payment status.
4. Open All Program Enrollments and inspect the available enrollment records.
5. Open API Integration Log Report and review request payloads, response payloads, execution times, statuses, error messages, and retry information.
6. Open Integration Types to view the integration categories and source-system records.
7. Open Student Profile and review the student details, contact information, admission year, application status, and document count.
8. Compare the information shown in the different modules and note any integration status or error details.

Application Screens and Observations

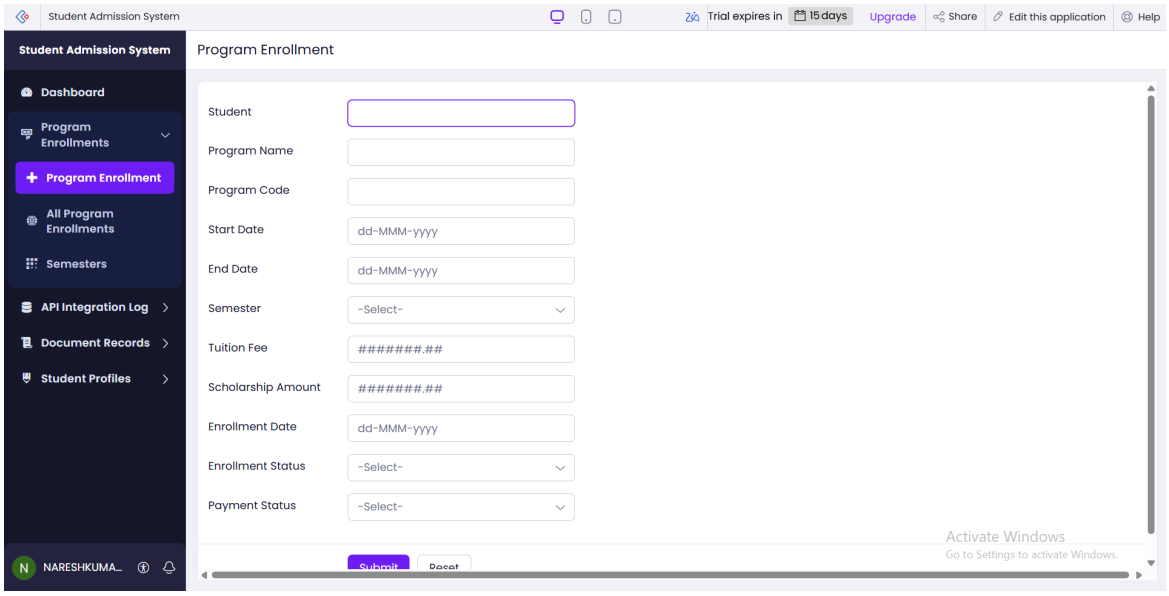

Dashboard – enrollment, fee, payment, retry, and source-system summaries

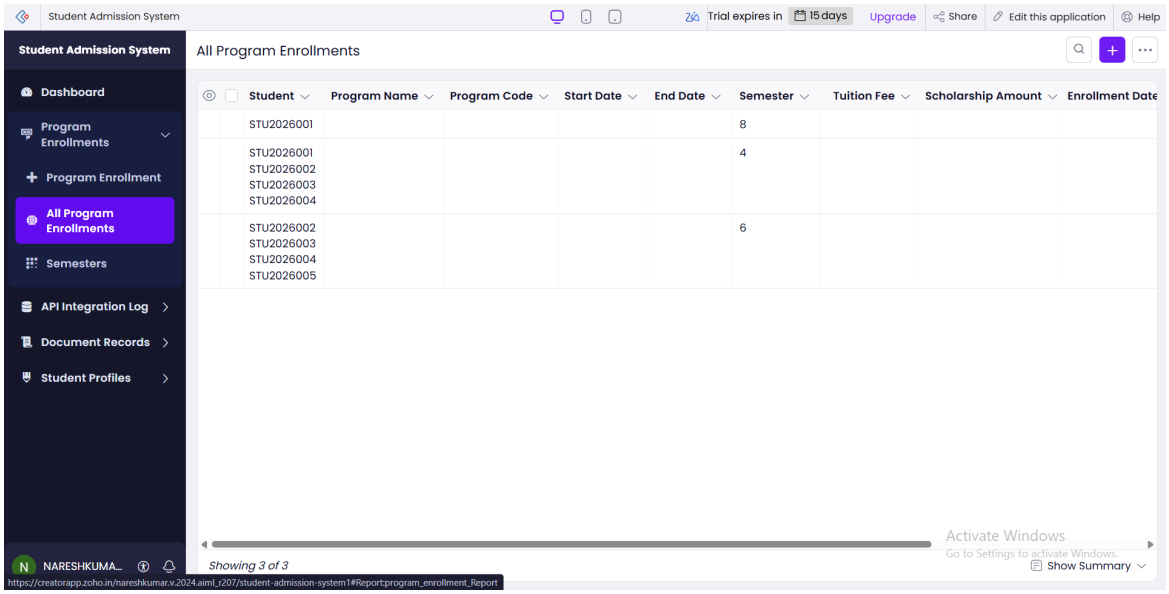

Program Enrollment – form for entering program and payment details

Application Screens and Observations

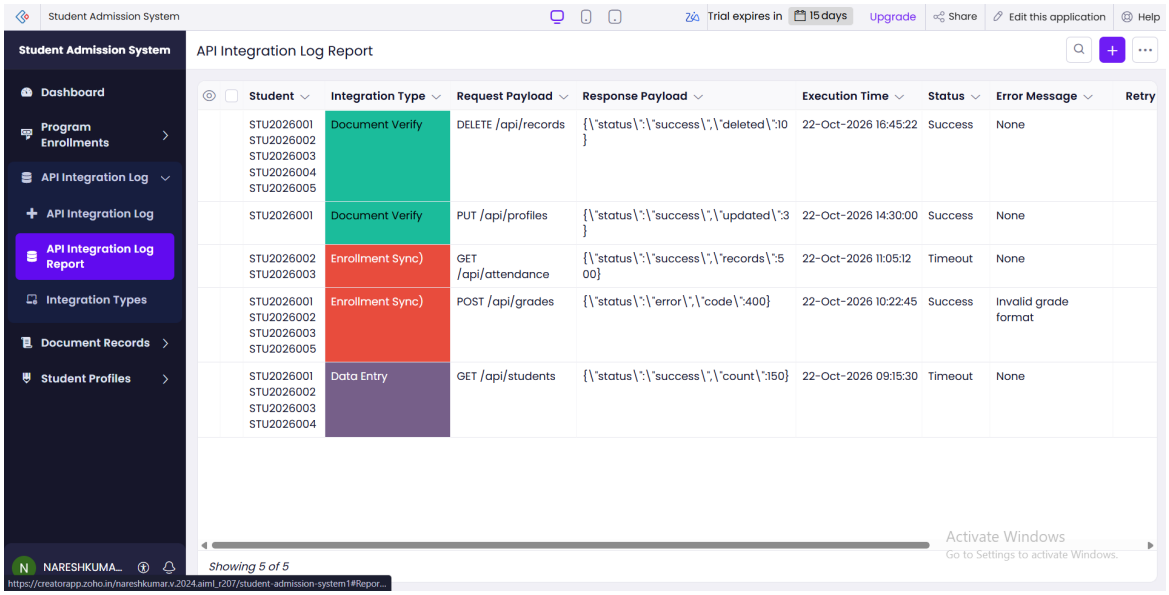

All Program Enrollments – tabular view of enrollment records

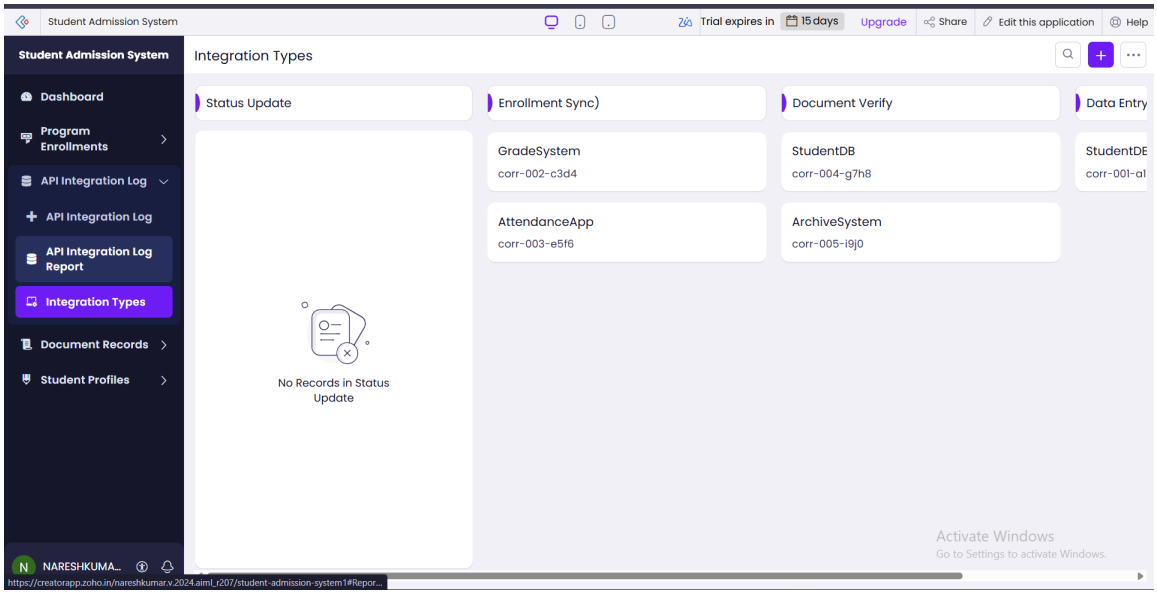

API Integration Log Report – request/response details and execution status

Application Screens and Observations

Integration Types – categories and configured source-system records

Student Profile – student details and application information

Result

The Student Admission System in Zoho Creator was examined successfully. The dashboard provides an overview of enrollment and payment information, while the program enrollment, student profile, API integration log, and integration-type modules support the management and monitoring of admission records and integration activity.
